4. RESEARCH

a. Research endeavours

The visual cognitive neuroscience of consciousness, with an emphasis on how *attention* tunes our visual minds and brains based on our current goals, actions, and past experiences to guide the contents of visual awareness. To investigate the cognitive and neural mechanisms that underlie attention, I employ a range of converging measures, including behaviour (reaction time, accuracy, limb tracking, and eye tracking),

pupilometry, electroencephalography (EEG; especially event-related potentials, ERP), and functional magnetic resonance imaging (fMRI).
